

How to remove comma at end of last line in an array

I am using `sed 's/,,$//'` to try to remove the comma at the end of the final line of an array, which has the opening and closing brackets on their lines (as shown below). This command `sed 's/,,$//'` isn't working as intended.

If I do `sed 's/,$//'` it will remove the closing array bracket, as I know I'm kind of on the right track...

```
0
{"foo":"foobar","foo":{"foo":1,"fo_foo":1},
{"bar":"barbar","foo":{"foo","fofoo"},
}
```

this is for a bash script, please do not provide answer that uses perl.

[bash](#) [sed](#)

Is this supposed to be valid JSON? The thing producing it should be fixed to stop adding the incorrect comma. — [chepner](#) 1 hour ago

@chepner yes, it is, not sure how to do that (subject for another question...) — [Leahcim](#) 1 hour ago

There is no comma in last line so `sed 's/,,$//'` will not work for `sed`.

Instead of `sed` you can use `awk`:

```
awk 'END == 1{gsub(/,$/, "");} END{print $0} {gsub(/,$/, "");} END{print $0}' FILE
{"foo":"foobar","foo":{"foo":1,"fo_foo":1},
{"bar":"barbar","foo":{"foo","fofoo"},
}
```
